

CENTRAL NF WASTE MANAGEMENT COMMITTEE

On April 11, 2002 the Central NF Waste Management Committee held an executive meeting followed by a general meeting to meet with the representative of BAE Newplan and discuss Phase I of the Central NF Waste Management Study.

Mr. Allan Scott - Chair of the CNWMC and Mr. Walwin Blackmore - NLFM representative provided the background information on the study, the process of developing the Terms of Reference and the selection of the consulting firm to complete Phase I of the study.

Mr. Scott introduced Mr. Albert Williams of BAE Newplan. Mr. Williams gave a brief overview of his consulting firm and went into some detail on Phase I of the study and gave some general information of Phases II and III.

Phase I will produce a detailed Waste Audit. Within Phase I parameters the precise boundaries will be determined and a collection of existing data on waste management practise in the region will be undertaken. The Waste Audit will include types of waste, waste generators and quantities. It will include identification of waste collected, transportation systems, potential disposal sites, recycling programs and all of their associated costs.

The Waste Audit will generate a database to prepare the selections of Waste Management Strategies.

Phase II will do further studies into particular systems and sites for waste management and Phase III will zero in on the recommended Waste Management System.

The Central NF Waste Management Committee asks that all communities provide full cooperation in discussion of waste management when a member of BAE Newplan visits or contacts your community.
